SUMMARY

ML Engineer who likes turning research-grade models into things that actually ship – like a U-Net hitting 95.20% precision on medical images and a graph neural network for survival prediction. ISRO and MNNIT Allahabad alum, now looking for an ML/AI role to keep building and deploying real-world models.

EDUCATION

• United College of Engineering and Research <i>Bachelor of Technology – Computer Science & Engineering</i>	<i>CGPA: 6.8</i>	Prayagraj, UP 2021 – 2025
• MPVM Ganga Gurukulam <i>Intermediate (10+2) – CBSE</i>	<i>83%</i>	Prayagraj, UP 2021
• MPVM Ganga Gurukulam <i>High School (10th) – CBSE</i>	<i>87%</i>	Prayagraj, UP 2019

TECHNICAL SKILLS

ML Frameworks	PyTorch, TensorFlow, Keras, Scikit-learn, PyTorch Geometric
Programming	Python, SQL
Libraries	NumPy, Pandas, Matplotlib, Seaborn, NLTK, VADER, OpenCV
Concepts	CNNs, U-Net, GNNs, NLP, Transfer Learning, Data Preprocessing
Cloud & Tools	Azure ML Studio, Google Cloud (Beam ML), Git, Jupyter Notebook

INTERNSHIPS

Biostatistics Intern <i>Teachnook</i>	Sep 2024 – Oct 2024 (Remote)
- Applied ML in Python for survival prediction using scikit-learn, achieving 0.6942 F1-score on biostatistical datasets. - Conducted statistical inference, hypothesis testing, and data visualization on biological datasets.	
AI/ML for Geodata Analysis <i>ISRO — Indian Institute of Remote Sensing (IIRS), Dehradun</i>	Aug 2024 (Remote)
- Applied ML techniques for satellite geodata processing and spatial statistics under ISRO's Department of Space, Government of India. - Worked on predictive modeling and feature extraction from geospatial datasets using Python.	
Machine Learning Intern <i>Department of CSE, MNNIT Allahabad</i>	Jun 2024 – Jul 2024 (Prayagraj, UP)
- Built a U-Net deep learning model using TensorFlow and Keras for polyp segmentation in 1,500 colonoscopy images, achieving 95.20% precision and 0.87 F1-score. - Preprocessed images with OpenCV, reducing processing time by 20% and improving diagnostic accuracy by 10% over traditional methods.	

PROJECTS

Polyp Segmentation with U-Net <i>TensorFlow, Keras, OpenCV</i> GitHub	
- Trained a U-Net on 1,500 CVC-ClinicDB colonoscopy images to segment polyps, reaching 95.20% precision and a 0.87 F1-score using a combined Dice + Binary Cross-Entropy loss. - Used this model during my MNNIT Allahabad internship, where it improved diagnostic accuracy by 10% over traditional segmentation methods.	
GNN for Survival Prediction <i>PyTorch, PyTorch Geometric</i> GitHub	
- Modeled the Titanic dataset as a graph (891 nodes, 1,200 edges) and trained a Graph Convolutional Network to predict survival, reaching an 85% concordance index and 0.6942 F1-score. - Cut prediction error by 15% versus baseline models by training with GPU acceleration over 10,000 iterations.	
Adult Income Prediction <i>Python, Scikit-learn, Pandas</i> GitHub	
- Built a full ML pipeline on the UCI Adult Census dataset (48K records), comparing Random Forest, Gradient Boosting, and Logistic Regression with cross-validation and ROC-AUC scoring. - Wrapped preprocessing (scaling, encoding, imputation) into one reusable sklearn Pipeline using ColumnTransformer.	
Amazon Sentiment Analysis <i>Python, NLTK, VADER</i> GitHub	
- Used VADER to classify 10,000 Amazon Fine Food reviews as positive or negative, reaching 88% accuracy and a 0.85 F1-score. - Trimmed the feature space by 40% through tokenization and stop-word removal.
