SUMMARY

Python developer who has built and deployed REST APIs that actually serve real ML models in production – a Flask backend on Docker/HuggingFace Spaces and a FastAPI service on Render, both live. ISRO and MNNIT Allahabad alum, looking for a backend or Python developer role to keep building things that work at scale.

EDUCATION

- **United College of Engineering and Research**
Bachelor of Technology – Computer Science & Engineering CGPA: 6.8 Prayagraj, UP
2021 – 2025
- **MPVM Ganga Gurukulam**
Intermediate (10+2) – CBSE 83% Prayagraj, UP
2021
- **MPVM Ganga Gurukulam**
High School (10th) – CBSE 87% Prayagraj, UP
2019

TECHNICAL SKILLS

Languages	Python, JavaScript, SQL
Backend	Flask, FastAPI, Node.js, Express.js, REST APIs
ML & Data	PyTorch, TensorFlow, Keras, Scikit-learn, PyTorch Geometric, Pandas, NumPy
Databases	MongoDB, MySQL
Tools & DevOps	Docker, Git, Unicorn, Uvicorn
Deployment	HuggingFace Spaces, Render, Vercel

INTERNSHIPS

- Full Stack Development Trainee** Sep 2022, 4 Weeks (Prayagraj, UP)
Allsoft Solutions | IBM Business Partner
- Completed an IBM Business Partner-certified training program on full-stack web development, building *Assignment 0* using HTML, CSS, JavaScript, Node.js, and MongoDB.
 - Gained hands-on backend experience with server-side JavaScript (Node.js) and NoSQL data modeling (MongoDB) (Ref. MO/SEP2022/E10203).
- Machine Learning Intern** Jun 2024 – Jul 2024 (Prayagraj, UP)
Department of CSE, MNNIT Allahabad
- Built a U-Net deep learning model in Python using TensorFlow and Keras for polyp segmentation in 1,500 colonoscopy images, achieving 95.20% precision and 0.87 F1-score.
 - Preprocessed images with OpenCV, reducing processing time by 20% and improving diagnostic accuracy by 10% over traditional methods.
- AI/ML for Geodata Analysis** Aug 2024 (Remote)
ISRO | Indian Institute of Remote Sensing (IIRS), Dehradun
- Applied Python-based ML techniques for satellite geodata processing and spatial statistics under ISRO's Department of Space, Government of India.
 - Worked on predictive modeling and feature extraction from geospatial datasets using Python.

PROJECTS

- PolypSeg AI – Flask Backend for Medical Image Segmentation** | *Python, Flask, TensorFlow, Docker* | [GitHub](#)
- Built a Flask REST API serving an Attention U-Net model that processes uploaded colonoscopy images and returns a segmentation mask, overlay, and polyp coverage metrics as JSON.
 - Containerized the backend with Docker and deployed it on HuggingFace Spaces, decoupled from a separately hosted Next.js frontend via a configurable API endpoint.
- Digit Recognition API – FastAPI Backend for CNN Inference** | *Python, FastAPI, TensorFlow, Uvicorn* | [GitHub](#)
- Built a FastAPI service with a 10-step image preprocessing pipeline (threshold, crop, pad, resize) that feeds a TensorFlow CNN trained to 98.74% validation accuracy and returns digit predictions with confidence scores.
 - Deployed on Render with health-check and prediction endpoints, consumed by a separately hosted React frontend.
- GNN for Survival Prediction** | *Python, PyTorch, PyTorch Geometric* | [GitHub](#)
- Modeled the Titanic dataset as a graph (891 nodes, 1,200 edges) and trained a Graph Convolutional Network in PyTorch Geometric to predict survival, reaching an 85% concordance index and 0.6942 F1-score.
 - Cut prediction error by 15% versus baseline models by training with GPU acceleration over 10,000 iterations.
- Adult Income Prediction** | *Python, Scikit-learn, Pandas* | [GitHub](#)
- Built an end-to-end ML pipeline on the UCI Adult Census dataset (48K records), comparing Random Forest, Gradient Boosting, and Logistic Regression with cross-validation and ROC-AUC scoring.
 - Wrapped all preprocessing (scaling, encoding, imputation) into a single reusable sklearn Pipeline using ColumnTransformer.
